Student management system

Student Management System – Content

1. Introduction

A Student Management System (SMS) is a software application used to manage student information efficiently. It helps educational institutions store, update, and access student records in one centralized system.

2. Objective

Maintain student records digitally.
Manage student attendance and marks.
Store course and department details.
Reduce paperwork and manual errors.
Provide quick access to student information.

3. Main Modules

Student Registration – Add and update student details.
Student Profile – Manage personal and academic information.
Attendance Management – Record and monitor attendance.
Marks Management – Enter and view examination marks.
Course Management – Manage courses and subjects.
Faculty Management – Store faculty information.
Reports – Generate student and academic reports.

4. System Process

Login → Student Registration → Manage Student Details → Attendance & Marks →
Generate Reports → Logout

5. Technologies Used

Frontend: HTML, CSS, JavaScript
Backend: Python / Java / PHP
Database: MySQL
Platform: Web-based application

6. Advantages

Saves time and effort.
Reduces data duplication.
Provides secure data storage.
Easy to search and update records.
Generates reports quickly.

7. Key Features

Secure login
Student registration
Attendance tracking
Marks management
Course management
Search and filter
Report generation

8. Conclusion

The Student Management System provides an organized and efficient way to manage student-related information. It improves accuracy, reduces manual work, and helps institutions manage academic activities effectively.
